RIPE NCC Update

Marco Schmidt
Policy Development Officer

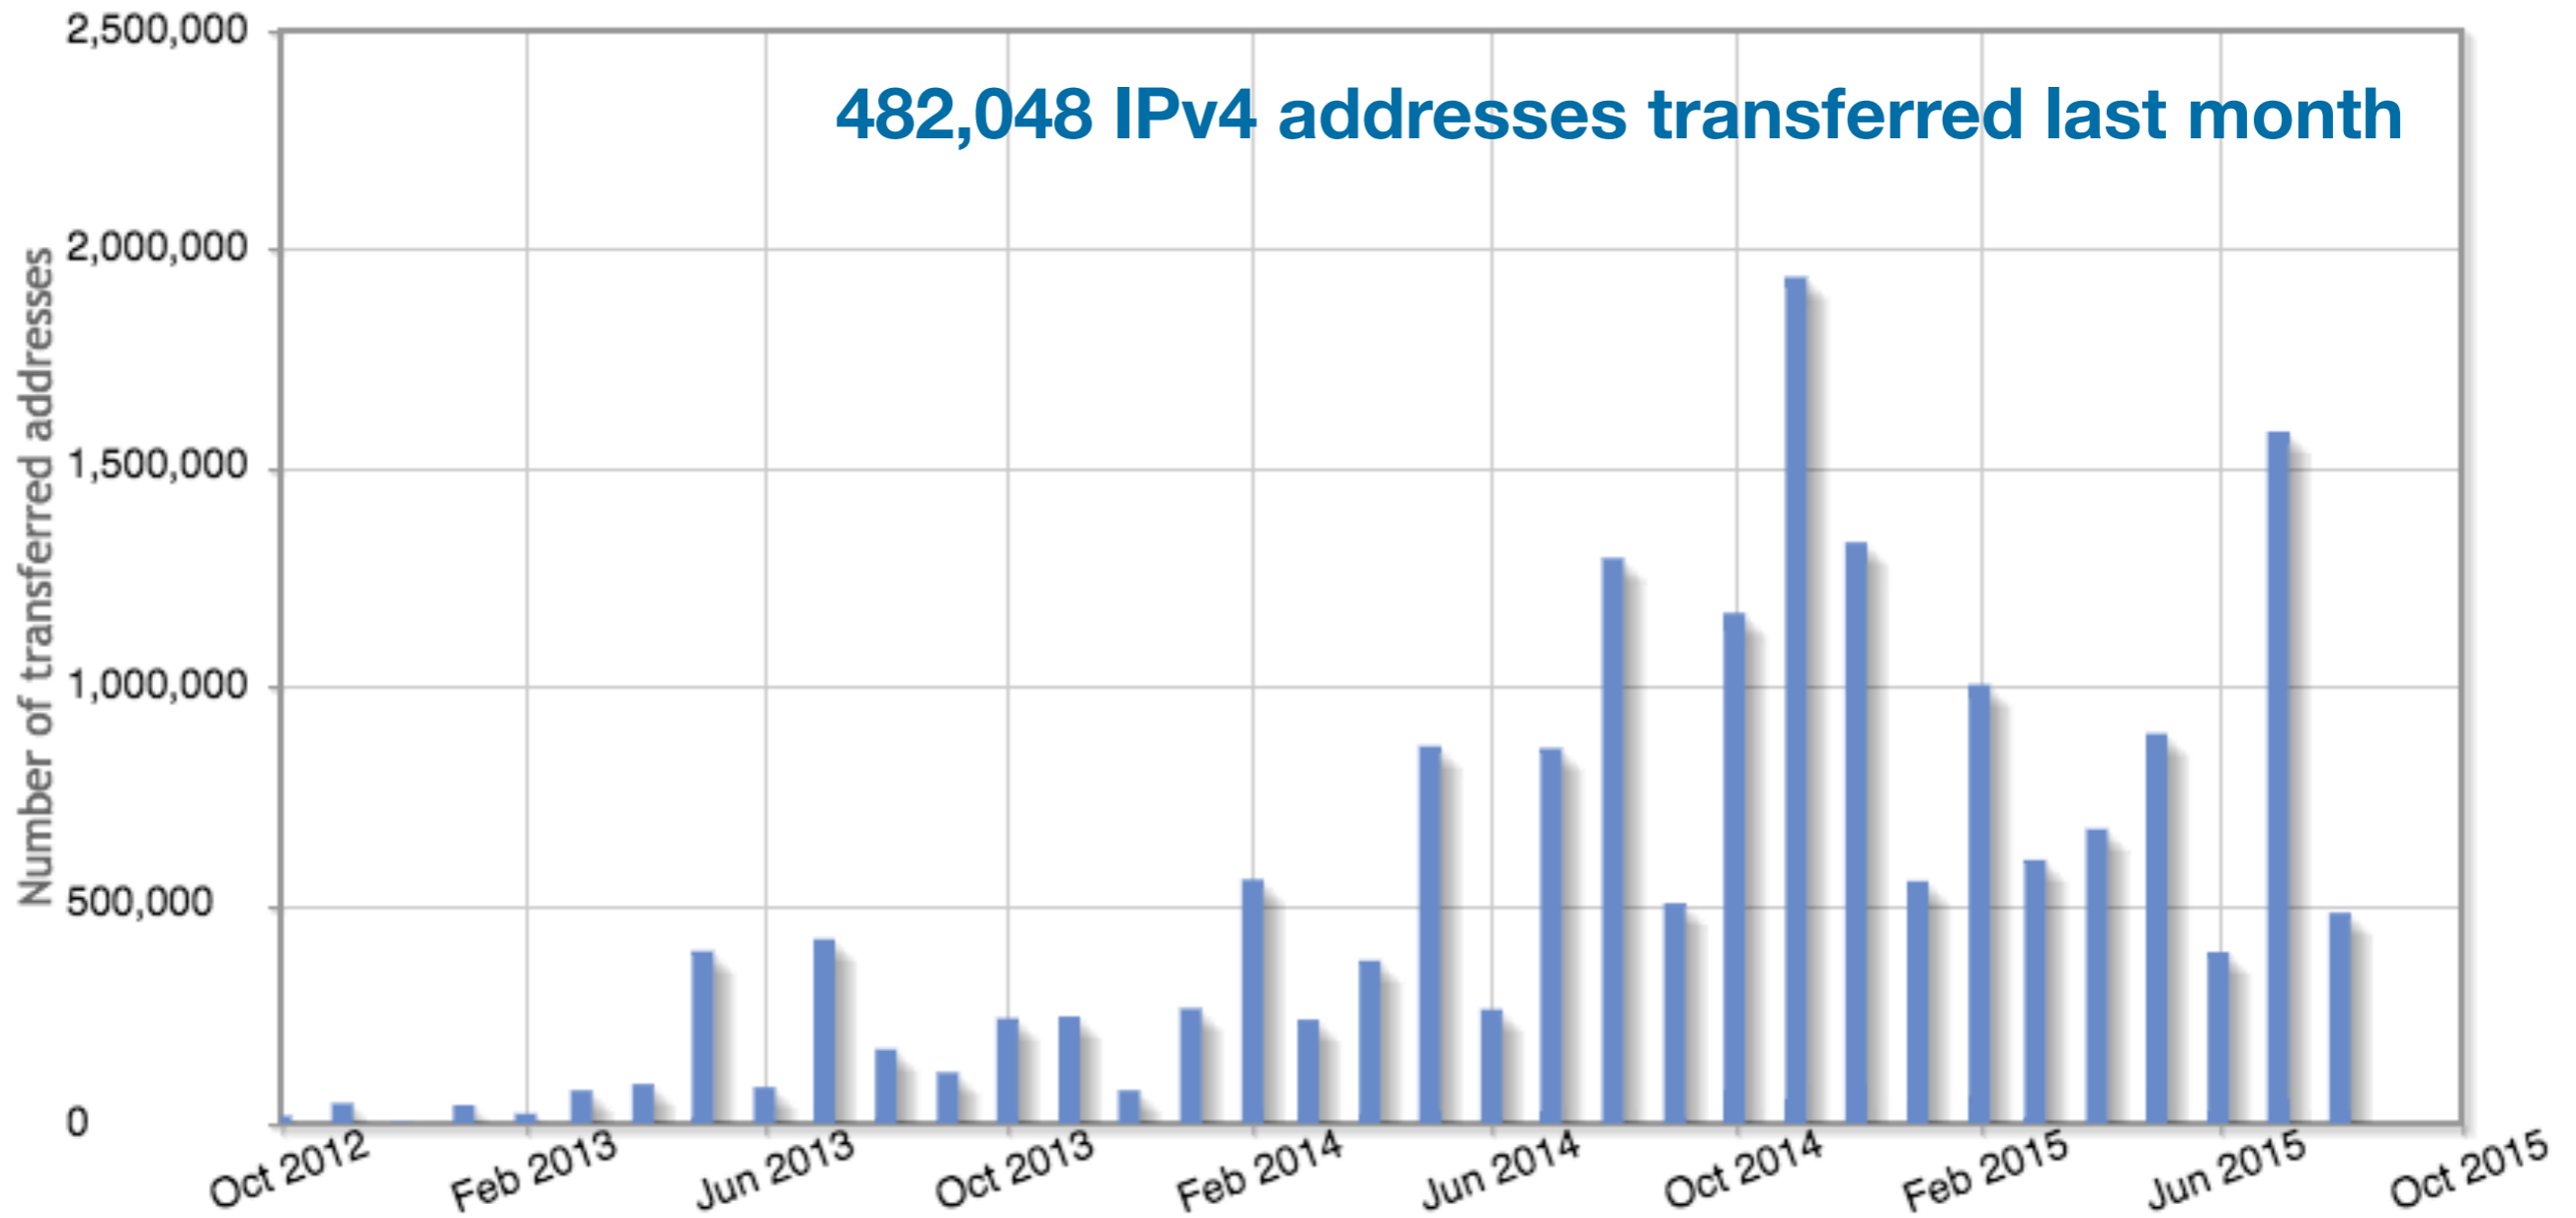

Total Number of LIRs

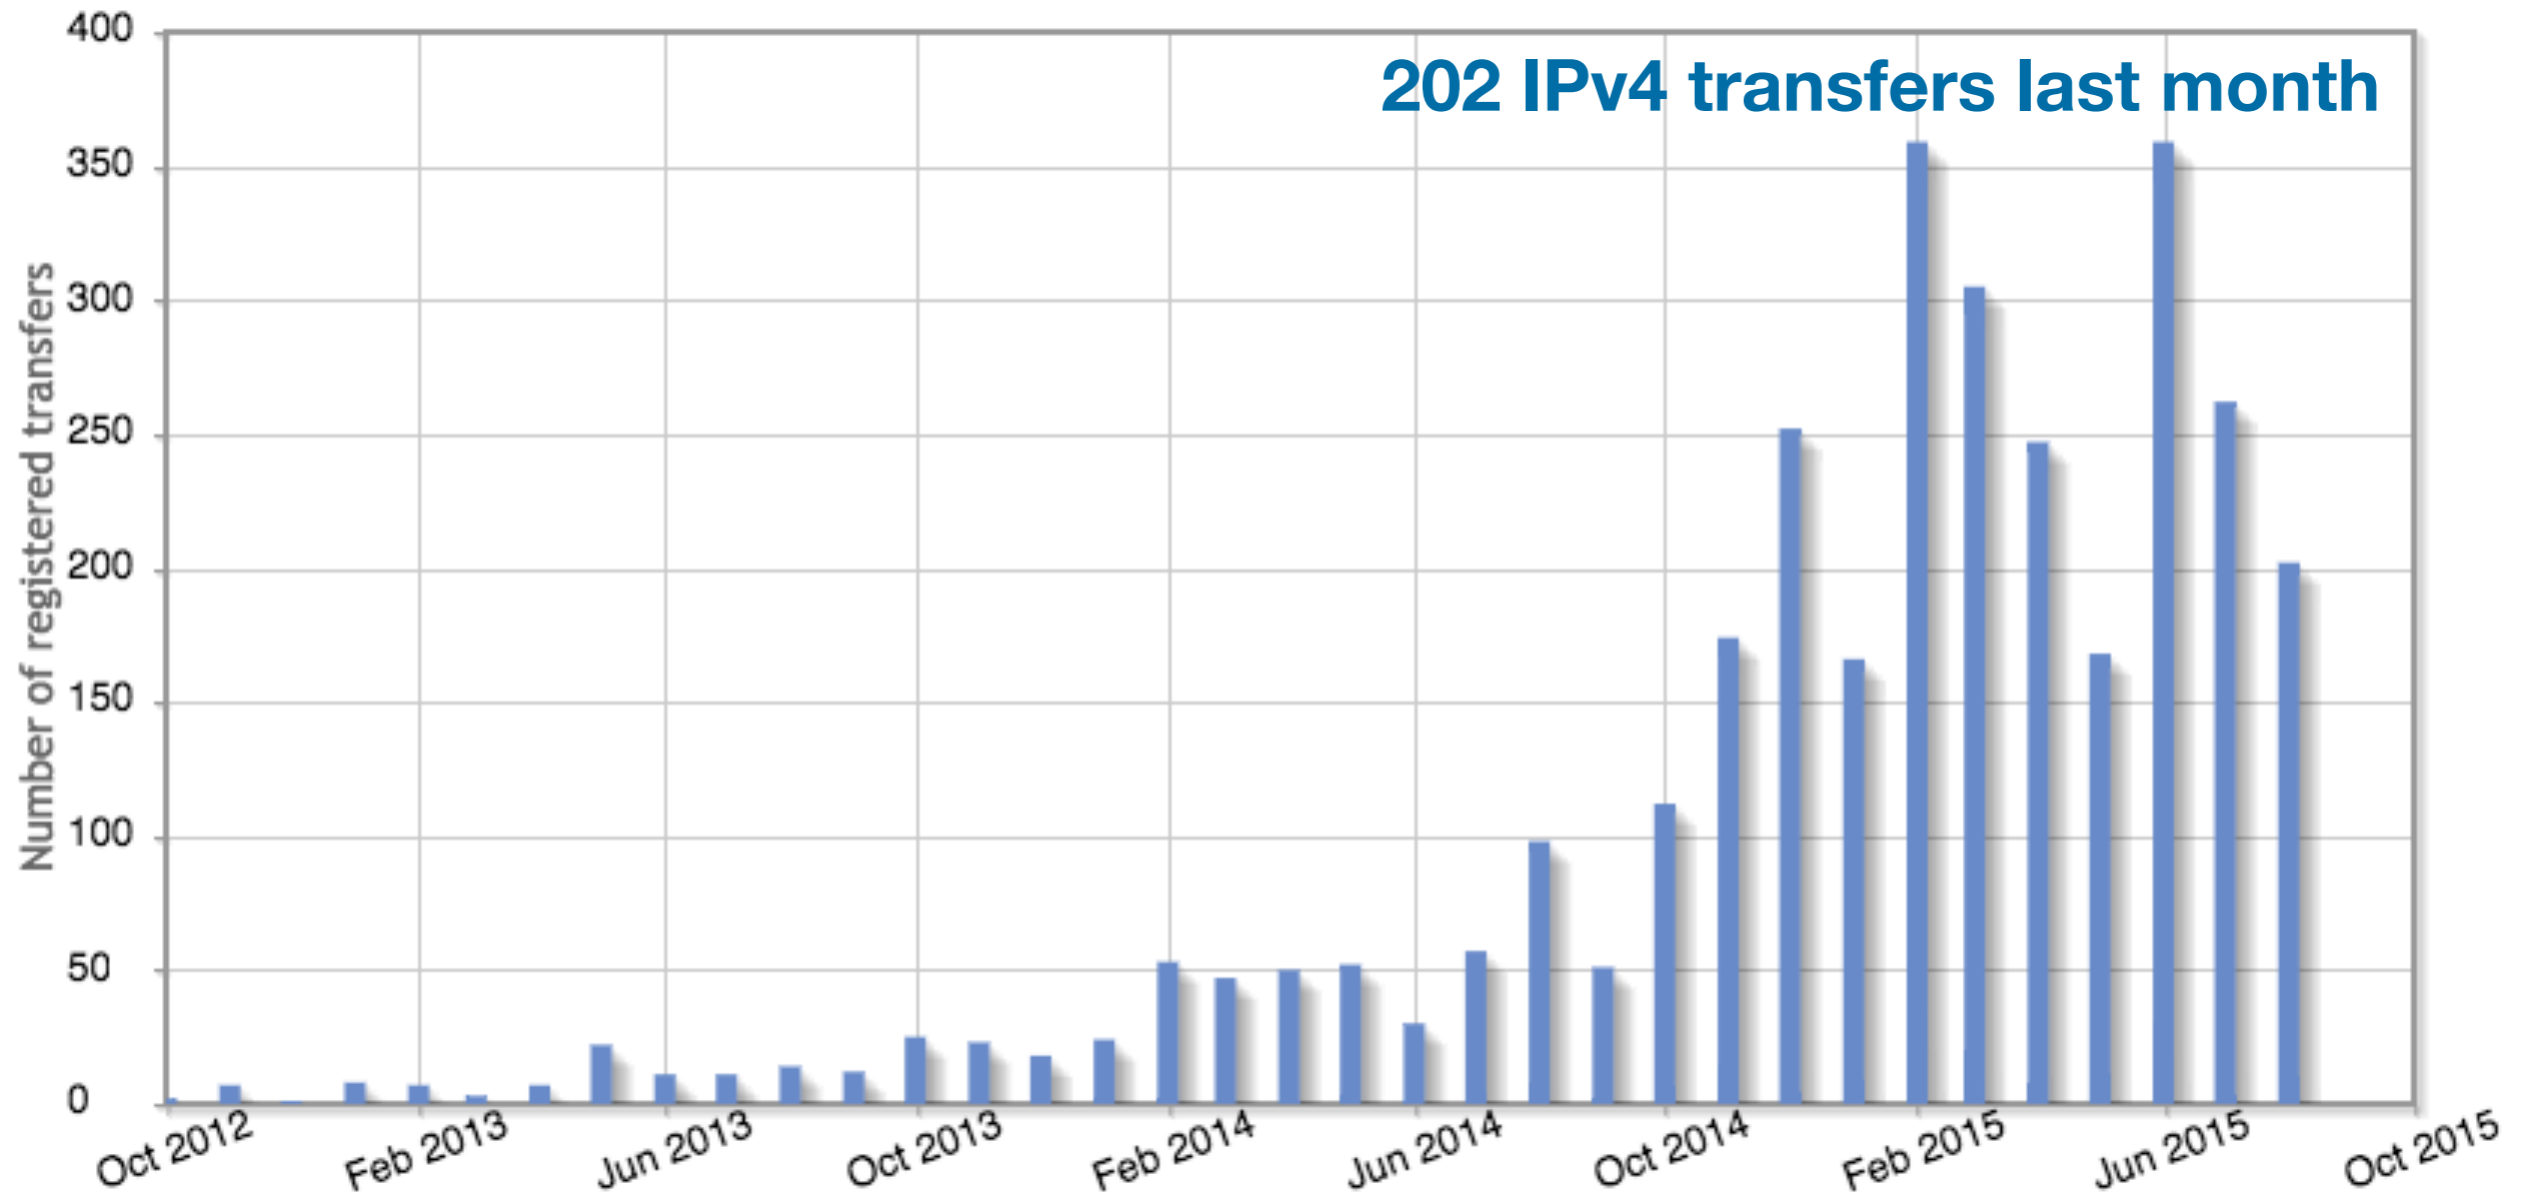

- **2014-03 “Remove Multihoming Requirements for AS Number Assignments”**
 - Allows networks to request ASNs without being multihomed
- **2015-03 “Assessment Criteria for IPv6 Initial Allocation Size”**
 - Widens the criteria the RIPE NCC looks at for initial IPv6 allocations
- **2015-04 “RIPE Resource Transfer Policies”**
 - Creates a single transfer policy document for all types of Internet number resources

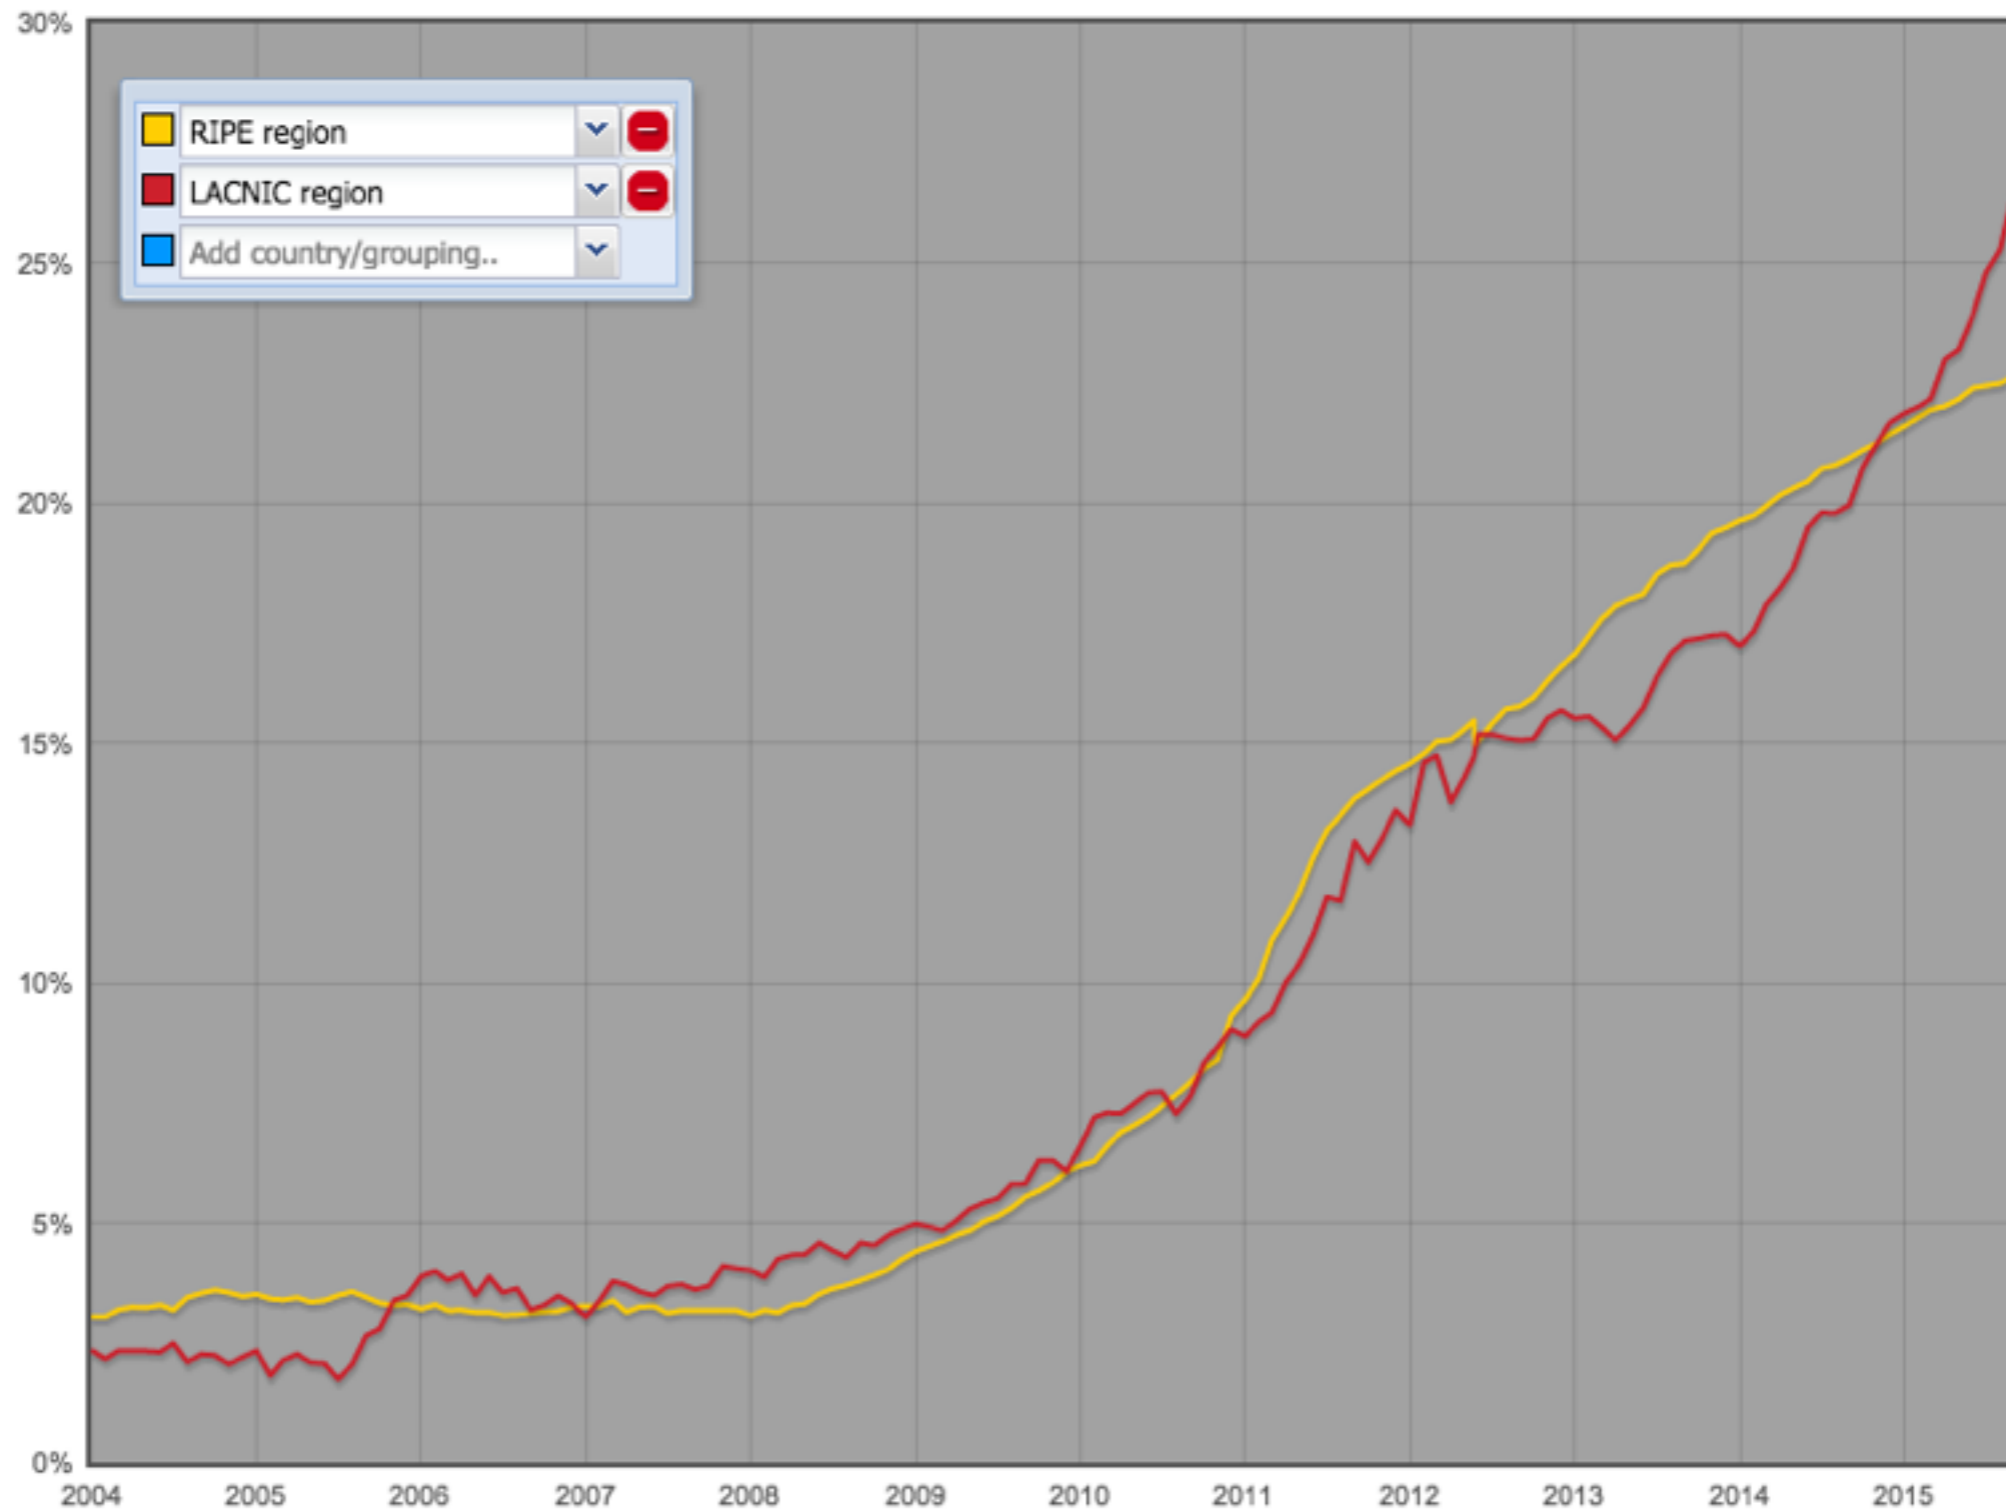

- We still have IPv4 addresses left — we have more than a /8 in the available pool
 - Every member can get 1,024 addresses (/22)
 - Block reserved for Internet Exchange Points
- “Alignment of Transfer Requirements” policy change avoids LIRs being created solely to transfer /22 allocations
- RIPE NCC Executive Board resolution that at least one full year’s membership fee must be paid before an LIR can close down

- All Internet number resources can now be transferred within the RIPE NCC service region
- Inter-RIR transfers available from end of September
- Number of IPv4 transfers increasing:
 - 919 transfers in 2014 / 2,167 so far in 2015
- 17 IPv6 / 26 ASN transfers so far
 - Mainly due to members transferring their entire networks

- Over 75% of our members have IPv6 address space
- Providing technical hands-on IPv6 training courses
- Improving our online IPv6 training and webinars
- IPv6 Roadshows — 10 planned for 2015
- “Train the Trainer” initiative to equip local talent in the Middle East region to deliver IPv6 training
- Contributing to the IPv6 Best Practices Forum (BPF) for this year’s IGF

- 150 16-bit ASNs in remaining pool
- Still have 2,850 returned 16-bit ASNs, most that are referenced in a number of database objects — will assign from this pool in future
- We have assigned 32-bit ASNs by default since 2009, which has encouraged adoption

16 and 32-bit ASNs in our Service Region

	16-bit	32-bit
Assigned in 2015	615 (39%)	979 (61%)
Total Assigned	22,580 (81%)	5,319 (19%)

- With your help we're building the largest Internet measurement network ever made.

- Currently at 8,568 connected probes and 138 RIPE Atlas anchors; aiming for 10,000 probes
- Being more selective about distribution — only looking for ASes that don't already have a probe
- Happy to have LACNIC's help
 - LACNIC hosting 2 RIPE Atlas anchors
 - Helping to distribute probes in your region
- Find out how others are using RIPE Atlas:
